or physical disability

Safety zone:
space to be kept clear
around each unit.

Linking zone:
zone in which linking zones
are allowed to overlap.

Due to our commitment to continuous improvement we reserve the right to apply changes without prior notice of termination. The designs, colours and/or photos and/or sizes specified and/or age categories in this catalogue are only illustrative and may sometimes differ from the included installation manual.

Only the latter is valid based on the European standard EN 1176.

A lot of children are growing up in a world of concrete and metal. However we are now aware that a green environment can improve the health and well-being of young and old. Children are therefore encouraged to play in line and with respect for nature. Over the last few years, many playgrounds are more equipped with natural materials such as tree trunks and wooden play equipment,...

Research shows that natural play offers unique challenges and learning opportunities to children. It makes playing more interesting and afterwards they generally feel better. Green playgrounds also invite children to exercise in a more intensive and varied way.

Eco-play mission:

Eco-play makes children happy by designing and manufacturing natural play equipment for public use.

(77 m²)

A photograph of a park with a wooden playground structure, trees, and people. The playground structure is made of light-colored wood and has several horizontal bars. A young boy in a light blue shirt and khaki pants is climbing on the structure. A young girl in a white dress is standing on a lower bar. Other people are visible in the background, including a man in a white shirt and a woman in a white shirt. The ground is covered in wood chips. There are many trees in the background, some with green leaves and some with yellow leaves. The sky is blue.

**"The best classroom
is roofed only by the sky."**

- Margaret Mc Millan

Combi-knight fortress (with magic tower without roof, with balance trail)
